Instruction Types

- 8051 instructions are divided into three functional groups:
 - Data transfer operations
 - Arithmetic and Logical Instructions
 - Program branching operations

Data Transfer Instructions

- Data transfer instructions can be used to transfer data between an internal RAM location and an SFR location without going through the accumulator
- It is also possible to transfer data between the internal and external RAM by using indirect addressing
- The upper 128 bytes of data RAM are accessed only by indirect addressing and the SFRs are accessed only by direct addressing

Mnemonic	Description
MOV @Ri, direct	[@Ri] = [direct]
MOV @Ri, #data	[@Ri] = immediate data
MOV DPTR, #data 16	[DPTR] = immediate data
MOVC A, @A+DPTR	A = Code byte from [@A+DPTR]
MOVC A, @A+PC	A = Code byte from [@A+PC]
MOVX A, @Ri	A = Data byte from external ram [@Ri]
MOVX A, @DPTR	A = Data byte from external ram [@DPTR]
MOVX @Ri, A	External[@Ri] = A
MOVX @DPTR, A	External[@DPTR] = A
PUSH direct	Push into stack
POP direct	Pop from stack
XCH A, Rn	A = [Rn], [Rn] = A
XCH A, direct	A = [direct], [direct] = A
XCH A, @Ri	A = [@Rn], [@Rn] = A
XCHD A,@Ri	Exchange low order digits

Arithmetic Operations

- The appropriate status bits in the PSW are set when specific conditions are met, which allows the user software to manage the different data formats
